

### NS 54/1 • FUNCTIONAL MODEL OF THE TARSUS

Natural size, in SOMSO-PLAST®. The model was developed in co-operation with Dr. med. Urs Schneider. This model shows the semiquantitative displacement of the individual tarsal bones during the transition from a neutral position of the non-weight-bearing foot to inversion and eversion. This is intended to provide an insight into the movement of the foot under physiological and pathological conditions. On a stand with green base. Height: 23 cm, length: 33.5 cm, depth: 15 cm, weight: 1.45 kg
