

HS 1 • HEART

Enlarged approximately twice, in SOMSO-PLAST®. The heart, sectioned vertically, separates into 2 parts towards the level of the ventricular septum, after the aortic arch and superior vena cava have been removed. Both auricles and ventricles (with the bicuspid and tricuspid semilunar valves), as well as the sigmoid valves, can be seen. Separates into 3 parts. On a green base with a transparent vault of the diaphragm, showing the outline. Height: 33 cm, width: 25 cm, depth: 30 cm, weight: 3.5 kg
